Objective

Passionate about software architecture and finding innovative solutions to problems. I enjoy using technical, analytical and problem-solving skills to create dynamic, high-speed websites, apps that help fuel competitive advantage and revenue growth

Skills

Javascript, HTML5, CSS3, React.Js MySQL, MongoDB, Node.js,Github, jQuery

Projects

Inventory App
Currently creating an inventory management website that will help keep track of all the inventory in the lab. The site will be database intensive and will allow CRUD operations. The main technologies used will be MySql for the backend database and React for the client side.

Education

University of Minnesota Trilogy Coding Bootcamp
Graduated: 2019 , St.Paul, MN

University of Minnesota-Twin-Cities / Biology
Graduated: 2012, Minneapolis, MN,

Work Experience

Hennepin HealthCare/ LabAssistant/April 2016-current

•Used healthcare software such as Epic and Cerner to access patients records and to help analyze any issues pertaining to laboratory work

•Stored and tracked all specimens in the lab by using database software, and suggested how certain lab test could be processed quicker by updating the lab test directory website
